Horizontal Demo Mounts

These mounts lay flat on countertops and tabletops. Each mount allows you to demonstrate specific lock and armature function with respect to release, movement, alarm and reset. BondStat and DPS demo units feature the M32 Maglock. MM15 has replacement "low tension" steel leaf springs which allows full mechanical movement of mandibles. PB3 illuminated Push Button is the standard lock release. DSB demo mount comes with a magnetic cabinet lock to illustrate dual switching for lock release. Each horizontal demo unit comes with anti-skid rubber feet to prevent sliding during operation.

Vertical Demo Mounts

These mounts illustrate the products in a normal or "mounted" position. The GL1 demo includes an integrated DK-11 digital keypad to simulate entry and exit. The UnLatch® demo is a double sided unit featuring a Stainless UNL and US03 MUNL on opposite sides with independent button activation for both. The SABL demo is supplied with a 26D unit that is pre-programmed with user, passage and lockout codes. The wood fixture has a cutout on top that accomodates optional SABL programming cards. Each vertical demo unit comes with anti-skid rubber feet to prevent sliding during operation.

"Mountless" Product Demos

These are non-electrified "static" demos. The SASM demo is comprised of the SASM parts kit and a M32 strike plate mounted to an aluminum angle bracket which simulates Maglock/armature impact and shock absorption. The BPS-12/24-1 demo includes a four color "features and benefits" decal inside the unit's steel to assist selling efforts. The adjustable Z Bracket Kit is designed for use with M32/M62 Maglocks and includes a dress cover (boxed product sample).

All of Securiton's electrified demo mounts come with a portable plug-in power supply
